PROFESSIONAL SUMMARY

Senior Mobile Developer with 7+ years of experience building secure, high-performance mobile applications, primarily native Android with Kotlin, Jetpack Compose and Clean Architecture, plus cross-platform apps in Flutter. Delivered government-grade and high-traffic consumer products, including Dubai Police (Esaad Card) and The ENTERTAINER (Android and iOS, GCC-wide). Brings AI-assisted development into day-to-day engineering: works with Claude Code as a coding agent, connects it to Figma, Jira and Confluence through Model Context Protocol (MCP) servers, and authored the custom agent skills the ENTERTAINER Android team uses to keep AI-generated code on its architecture and design system. Ships complete features and apps with AI, from design to release, with every scenario tested before it reaches users. Leads modules, code reviews and mentoring in Agile/Scrum teams. Based in Dubai and open to full-time roles.

TECHNICAL SKILLS

- **Android:** Kotlin, Java, Android SDK, Jetpack Compose, XML Views, Data Binding, Coroutines, Flow, StateFlow, LiveData, Hilt, Navigation Component, Material Design, Custom Views, Animations
- **Cross-Platform:** Flutter, Dart, BLoC, Provider, Riverpod, Compose Multiplatform (Kotlin Multiplatform)
- **Architecture:** MVVM, MVI, Clean Architecture, Multi-Module Modularisation, Single-Activity Architecture, Dependency Injection
- **AI and Agentic Development:** Claude Code, Model Context Protocol (MCP), Agent Skills, Prompt and Context Engineering, Figma MCP (design-to-code), Atlassian MCP (Jira, Confluence), AI-Generated Unit Tests, AI-Driven On-Device Verification, AI-Assisted Code Review, AI Agents, LLM Chat Integration
- **Networking and Security:** Retrofit, OkHttp, Ktor, REST APIs, WebSockets, OAuth2, JWT, SSL Pinning, Mutual TLS (Client Certificates), AES, SRTP, End-to-End Encryption
- **Data and Persistence:** Room, SQLite, SQLCipher, DataStore, SharedPreferences, Hive
- **Testing and Quality:** JUnit, MockK, Espresso, Coroutines Test, Firebase Crashlytics, Performance Monitoring, Code Review
- **CI/CD and Tools:** Git, GitHub Actions, Fastlane, Azure DevOps Pipelines, Firebase (FCM, Auth, Remote Config), Google Play Console, Android Studio, AWS CodeCommit
- **Product and Process:** Localisation and RTL (Arabic), Analytics (Amplitude, Firebase), Feature Flags, Deep Linking, Agile/Scrum, Jira

PROFESSIONAL EXPERIENCE

Senior Mobile Developer

The ENTERTAINER | Dubai, UAE | Jul 2023 – Present

- Lead Android (Kotlin, Jetpack Compose) and Flutter development for The ENTERTAINER, a high-traffic lifestyle rewards app on Android and iOS across the GCC.
- Introduced AI-assisted development to the Android team: authored 11 custom Claude Code agent skills that encode the team's engineering standards, including edge-case unit testing, on-device verification of every feature scenario, API layering and Figma design fidelity.
- Deliver features end to end with AI: Claude Code implements from the PRD and Figma frames, writes unit tests for every edge case and runs every test scenario on a real device, with each change reviewed by me before release.
- Connected Claude Code to Figma, Jira and Confluence through MCP servers to turn PRDs and Figma frames into implementation plans, code, unit tests and feature handover documents; configured AI-powered agents with MCP servers for customer engagement and personalised features.
- Raised the crash-free user rate from 50% to 99% through stability and performance optimisation, and made app startup 28% faster than six months earlier.
- Migrated the large multi-module codebase to the latest Android SDK, Jetpack libraries and Jetpack Compose, reducing build times by 15%, and consolidated legacy data and UI module pairs into single feature modules.
- Built 50%+ of new UI screens in Jetpack Compose and Flutter, including membership, benefits and account flows, and introduced an app-wide typography system, shared toolbar component and locale-aware currency formatting for English and Arabic (RTL).
- Built CI/CD with Fastlane and GitHub Actions for Android and Flutter and made it tag-driven: a tag selects the development, UAT or production build, so builds run only when needed instead of on every push, saving CI resources.
- Lead code reviews, enforce best practices and mentor developers, reducing production bugs by 20%.

Senior Android Developer

NeeoPal Software Solutions Pvt. Ltd. | Lahore, Pakistan | Sep 2022 – Jul 2023

- Developed and maintained Android (Java, Kotlin) and Flutter (Dart) applications, delivering scalable, high-quality cross-platform solutions.
- Integrated an AI-powered chat feature using NLP frameworks, alongside BLoC, Provider, Firebase and REST APIs, increasing user engagement.
- Refactored code, fixed defects, optimised performance and added large-screen Android support, improving stability and reducing development time.

Junior Research Officer (Android)

Bahria Enterprise Systems & Technologies Ltd. | Islamabad, Pakistan | May 2020 – Aug 2022

- Built a secure VoIP and chat application with end-to-end encryption (AES, SRTP), improving data-security compliance by 30%.
- Migrated the application to Single-Activity MVVM architecture, improving performance and reducing memory leaks.

Android Developer

Cane Technologies & ODL | Pakistan | Jun 2019 – Apr 2020

- Developed multiple Android applications with a focus on performance, stability and user experience.

Android Developer

ODL – Oxmite Digital Ltd. | Pakistan | Jun 2018 – May 2019

- Reduced crash rates by 30% by monitoring and resolving production issues with Firebase Crashlytics and Google Play Console.
- Accelerated release cycles by 20% through improved debugging and QA collaboration.

KEY PROJECTS

The ENTERTAINER | Kotlin, Jetpack Compose, Flutter, Claude Code, MCP
High-traffic lifestyle rewards app with dining, leisure and travel offers across the GCC, on Android and iOS. Led UI modernisation to Jetpack Compose, delivered features end to end with Claude Code, unit tests and on-device verification, reached 99% crash-free users and made app startup 28% faster. Live on Google Play and the App Store.

Esaad Card – Dubai Police | Kotlin, Jetpack Compose, Clean Architecture, Mutual TLS
Secure government application built from scratch with Clean Architecture and Jetpack Compose; implemented mutual SSL authentication with client-side certificates. Live on Google Play.

Indigo Rent A Car | Android, Google Maps, REST APIs, Claude (AI-built), Flutter
Car rental app for Dubai and Abu Dhabi with branch pickup or doorstep delivery, map-based delivery location, promotions and an end-to-end booking flow. Built largely by AI: generated with Claude from the design PDF, then reviewed, completed and shipped as a full product. Live on Google Play. Also rebuilt in Flutter with Claude as a cross-platform learning project.

NEEO IM & Chat Translator | Android, Kotlin, Retrofit, OAuth2, AWS CodeCommit
Messaging app with rewards and loyalty. Added an AI-powered chat feature using NLP frameworks and redesigned the channel and discussion UI to client specifications.

Takeme – Ride Hailing App | Kotlin, Kotlin Flow, Retrofit, Firebase, Google Maps
Real-time ride tracking with live GPS, route visualisation and custom markers, push notifications and deep linking via Firebase, and a Retrofit and Kotlin Flow network layer.

EDUCATION

M.S. Computer Science – COMSATS University Islamabad, Wah Campus | 2019 – 2022

B.S. Software Engineering – COMSATS University Islamabad, Wah Campus | 2014 – 2018

CERTIFICATIONS

- Compose Multiplatform – Android & iOS Development, Udemy, May 2025
- Dart & Flutter – Complete Development Course, Udemy, Aug 2025
